

Designfusion... adding a new dimension

SOLID EDGE

Solid Edge is a powerful 3D Design solution and is the only mainstream mechanical system that merges design management capabilities with the CAD tools that designers use every day. Solid Edge customers have a choice of scalable product data management solutions that manage designs as quickly as they are created. Practical tools for managed collaboration help to better coordinate design team activities and remove the errors that result from miscommunication.

SIEMENS

TEAMCENTER

The robust capabilities of Teamcenter provide the collaborative design management functionality that engineering teams need to manage design data and communicate both internally and externally to your organization. Teamcenter's proven digital lifecycle management solutions are built on an open product life management (PLM) foundation. Teamcenter is the world's most widely used PLM system.

SIEMENS

NX

NX is a next-generation digital product development system that helps companies transform the product lifecycle. With the industry's broadest suite of integrated, fully associative CAD/CAM/CAE applications, NX touches the full range of development processes in product design, manufacturing and simulation.

SIEMENS

FEMAP

Femap provides comprehensive functionality in an independent environment for modeling, simulation and review of product performance results. Femap is recognized as the world's leading CAD-independent Windows-native pre- and post-processor for advanced engineering finite element analysis (FEA).

SIEMENS

act/cut is used for shape nesting and programming CNC cutting machines following contours (laser, plasma, oxyfuel, waterjet, routing) as well as punching-nibbling CNC machines and combined technology machines (punching + plasma or laser or shearing).

alma

Z CORPORATION

Z Corporation 3D printers help you build speed and efficiency into your design process and the highest quality into your products. The printers are professional, complete physical modeling solutions delivering full-color communication.

Knovel®

Knovel is an online resource used by engineers and scientists around the world to quickly locate relevant and reliable technical information. Locating the right material, property, formula, or best practice can have dramatic impact on new product or process designs.

certeon®

Certeon's aCelera™ is the first application acceleration VA software to run natively within a VM infrastructure and to provide true application acceleration across the wide area network (WAN).

Voyager Program

Designfusion provides a complete set of 3rd party software and hardware products that tightly integrate with Solid Edge and are certified under the Siemens Voyager program. Whether you need interactive animations of product designs or a niche application for analysis or manufacturing, Designfusion can provide the solution.

Our Mission

Designfusion commits itself to outstanding customer service. Our objective is to enable our customers to effectively and efficiently implement technology at the leading edge of Computer Aided Engineering. The solution set that we provide enables the creation of products that are "right the first time" and of the highest quality in order to maximize productivity.

At Designfusion, customers are treated with the utmost professionalism. We value your time as highly as you do and strive to be efficient and concise in all aspects of our business dealings.

Our Company

Designfusion is a leading technology solutions provider specialising in the supply, integration, consulting of Siemens Product Lifecycle Management software for manufacturing, design and engineering companies. Designfusion also offers solutions for rapid prototyping, sheet metal cutting, knowledge-based engineering, application acceleration and product configurator. Founded in 2002, Designfusion has grown to become the largest dedicated North American Siemens PLM reseller. Designfusion's unique approach to providing a complete range of PLM products enables us to offer enduring solutions that scale to our customers business requirements. With offices in all the major Canadian manufacturing markets and experience in implementations ranging from single seat configurations to large multi-national global solutions, Designfusion is a technology partner you can rely on.

Our People

The Designfusion team consists of industry professionals with an extensive range of experience in technology support. Our specialists include Computer Aided Manufacturing experts, Information Technologists, Database Administrators through to Computer Aided Design analysts. Each member of our technical team has a minimum of five years applications support experience in addition to their industry background. Our bilingual hotline support service ensures that you are just a phone call away from accessing our eager team of industry professionals.

Support

Designfusion's support consistently receives high marks from our customers. The vast majority of enquiries are dealt with directly over the telephone. Our customers are not forced to deal with a single support option. Our customers are provided with direct access to the development centre or they can call our local Designfusion hotline. From time to time, customers request the staff at Designfusion spend some face to face time for a more in-depth look or explanation of problems or queries. This facility is included in our maintenance contracts as a free of charge support whenever justified and within reason.

The strongest testimony for the quality of support is our industry leading 98% maintenance contract renewal rate. Our customers enjoy the peace of mind and the continual technology improvement that is provided to our maintenance paying customer.

Training

Designfusion offers a wide range of training options for all of the products we provide. Our training consultants draw upon their industry experience to ensure that our customers not only understand the technology but also understand the application of the technology within their work environment. We ensure that after every course we take time to obtain customer feedback and are committed to continuous improvement. The Designfusion approach has won consistently positive reviews from our customers.

"Would not hesitate to take any courses especially with Designfusion involved."

Robert Bowen, Anchor Concrete

"Very knowledgeable, patient and helpful... one of the best instructors I ever had."

Bogna Gryc, EH Price

"... one of the best courses that I have taken."

Ron Yurkowski, Red River College

"I am really satisfied with this course... thanks to the staff at Designfusion I'll try to take additional courses in new versions of Solid Edge."

Trijana Grgic, Alcatel Transportation

Customization

We can help generate tools that are specifically tailored to your needs. These tools can be embedded into the Solid Edge or NX interface or can be standalone applications. In collaboration with your staff, we can ensure that automation and custom routines will reduce tedious, time consuming operations, prevent manual input errors, eliminate bottlenecks and significantly improve your turn around time.

**Saving your company time and money
is our number one priority.**
